

Corrosion Protection of De-Icing Equipment

Corrosion can shorten the life of equipment and increase the cost of maintenance. This problem is magnified when the equipment is exposed to road salt and other de-icing materials that accelerate the corrosion process.

Road Salt Neutralizer

Safely Removes Road Salt Residue

- Non-Corrosive
- Fast Acting
- Will Not Harm Painted Surfaces

Road Salt Neutralizer removes the chalky residue left behind by ice melting products. If left untreated, these road salts can harm and corrode surfaces.

Road Salt Neutralizer safely and quickly neutralizes and removes these salts without harming the surface.

Prevent

Aerosol Rust Preventative -
Lube - Penetrant

- Protects Against Rust and Corrosion
- Permanent Soft Coating (Will Not Dry)
- Excellent Water and Salt Water Resistance

Prevent is a permanently soft coating prepared from wool wax, specially refined petroleum oils, rust inhibitors and additives to impart excellent metal coverage. It is highly effective in providing control against rust in areas of high humidity and hostile environments that would break down normal rust

Pro-Seal

Vehicle Protectant

- Reduces Labor Costs
- Preserves Paint
- Easy-to-Use

Pro-Seal prevents the bonding of cement and asphalt to vehicle bodies and delivery systems by forming a hard, durable finish that will last from 4 to 14 days, depending on use, since it is specially formulated to withstand repeated washings, rain and other inclement weather.

Pro-Seal makes it easier to clean vehicles by not allowing bugs, dirt, road film, etc., to get to the surface of the vehicle. This reduces the cost of cleaning vehicles and it will also help to prevent the paint from chipping on vehicles.

3 Step System

Detco has a simple 3 Step System for complete corrosion protection of equipment.

Step 1:
Neutralize the salts with
Road Salt Neutralizer.

Step 2:
Protect exposed moving
parts with **Prevent.**

Step 3:
Protect other surfaces of
the equipment with **Pro-Seal.**

Road Salt Neutralizer removes the residue left behind by ice melting materials such as road salt. It will quickly neutralize and remove these salts without harming the surface.

Prevent penetrates and dissolves existing rust and leaves a water resistant coating on metal surfaces that will prevent rust and corrosion from forming. It also lubricates moving parts as it protects. **Prevent** is available in both aerosol and bulk liquid form.

Unprotected

Protected with Prevent

Pro-Seal is a protective coating for painted surfaces and can also be used on radiators, coolers and condensers to stop or slow corrosion from salt and brine.
